Subject: Fw: Plume Monitoring Today

Chet and Jay - can you help us with the question below (which areas were placed into the CAD cell on Wed and Th?? We were hoping to do our plume tracking on the Neimiec material since its close to Superfund dredge areas, but apparently this was not the case.

Dave

	Subject	Plume Monitoring Today

Dave:

I just spoke to Deirdre about the plume monitoring today. The good news is that Battelle was able to monitor the plume and received good signals. The unsettling news is that the Boat Captain told Paul Dragos that the sediment did not come from Niemiec. It came from somewhere else. Paul is going to talk to the Captain later today with map in hand to understand where the material came from. Of course the question of where yesterday's dump sediment came from. The Captain wasn't sure.

Do you know where the dredged material that was dumped today came from? If your contact is knowledgeable, can you ask them about yesterday's dredged material as well?

Tx

Bob
